The President's secret task force has developed an unprecedented defensive weapon that relies on an extremely rare radioactive element--and Dirk Pitt has followed a twisted trail to a secret cache of the substance. Now, racing against brutal storms, Soviet spies, and a ticking clock, Pitt begins his most thrilling mission--to raise from its watery grave the shipwreck of the century...

Dirk Pitt has it all, looks brains, cars and the women and this is one of my favorite books, probably more so because it is one of the first books I read of his more than anything else. I am not sure it is his "best" book but it is worthwhile anyway if you like his other books.

This one centers on the Titanic itself and some secrets materials it holds. Cussler is a researcher in real life and his passion for the sea comes through once again with enough points to add credibility to something, which of course, is by its nature incredible (good guys/bad guys/evil plots), but that is what his books are about.

There are some weak points along the way (sometimes the romance writing is not quite up to par) but the action and adventure aspects makes it a fun read, like the rest of Cussler's writings.
